" Medical Math In 3D"

With Special Guest Speaker Buck Feris

Date : November 23rd 2009

Time: 1400 hours EST.

This session will target Medical Math, i.e. Drug Calculations like never before. Special guest speaker Buck Feris is an EMS educator that has a lot of experience helping students who struggle with drug calculations. Several years ago he did some research on the origins of the drug calculation formula and found that it was based on a very simple concept in chemistry called "dimensional analysis." By teaching the mechanics of dimensional analysis to students Buck has been able to teach them to go beyond the simple memorization of a formula. Some of the key elements of this session will be:

-  **Helping to finally end the struggle with drug calculations**
-  **How knowing one simple concept will vastly improve your drug calculation skills**
-  **The true mechanics behind drug calculations**
-  **Discovering "dimensional analysis" and how it simplifies medical math**
-  **Modifying one easy formula that will fit all your medical math needs**

If you are a student who is struggling with this subject, or a practicing paramedic who wishes to finally master medical math, this is a course you won't want to miss.

Don't let this unique field focused session pass you by. Space is limited so sign up today.
